61-10994

Trans. of Journ[al] de Chimie Physique (France) 1959,
v. 56, no. 6, p. 593-608.

After presenting the means of research, we consider
the sundry influences that are manifested in the course
of an "actual" diffusion. The results derived from this
study are expressed as value of a single parameter,
surface concentration, the variation of which, as a
function of diffusion conditions, synthetically indicates
the areas of optimum production and, on the theoretic
level, the complex physicochemical arrangements to
which reactions in the interfacial region adhere. This
plan is repeated for boron and phosphorus, to bring out
the common features subject to generalization. (Author)

NOBLE METAL THERMOCOUPLES WITH HIGH
THERMOELECTRIC FORCE. [1962] 9p. (figs. omitted)
Order from SLA \$1.10 62-18232

I. Feussner, O.

Trans. of [ETZ] Elektrotechnische Zeitschrift.
[Ausgabe A. Zentralblatt für Elektrotechnik] (Germany)
1927 [v. 48] no. 11, p. 535-537.

DESCRIPTORS: *Thermocouples, Materials, Alloys,
*Thermoelectricity, Economics.

Corresponding to their position in the periodic table of
elements, alloys of gold and silver with palladium and
platinum have thermoelectric forces against copper and
other metals of comparable magnitude to that of the
well-known alloy constantan (copper-nickel). After the
discussion of general points a new alloy is described
which was used in the preparation of a new noble metal
(Physics-Thermodynamics, TT, v. 9, no. 9) (over)
